Colored indicators for correct installation

Productimages:

This set consists of the iPro Baby infant car seat and the iPro Base. The iPro Baby infant car seat has been approved according to the newest i-Size regulation R 129. It can be used for a body size of 40 - 85 cm and therefore for a long time. Together with the iPro Base, it is the perfect complement to our Apollo, Apollo Duo, Saturn R and Saturn R Duo pushchair models. Alternatively, with the help of adapters, it is also compatible with all stroller models that dispose of a Maxi Cosi counterpart.

The iPro Baby infant car seat is particularly safe thanks to its Multi Layer Safety Concept made of different energy-absorbing materials. Those offer exceptional protection in the head, neck, chest, and belly areas.

In addition, high-quality and breathable stretch materials have been used so as to offer maximum comfort for your little one. The integrated 3-point harness is height-adjustable and thus adaptable to your baby's size. The lateral paddings are individually usable and easy to remove, just like the newborn insert's seat part. iPro Baby has a light basic weight and is thus easy to carry even with child, while the high-quality carrying handle in aluminium is softly padded.

When used in a car, iPro Baby can be fixed with the car's 3-point belt or the separately available iPro Base. This base is usable in cars with and ISOFIX connection or i-Size seats.

In order to install the iPro Baby car seat on the base, it has to be put in the middle of the base. Special guides ensure then that the seat reaches the correct position. Coloured indicators guaranteed the correct installation and locking. In order to unlock the seats from the base, you need to push the button that can be found in the middle.

Our recommendation!

Mix & Match. When using the iPro Base already in combination with the iPro Baby car seat, you may keep it and combine it with the iPro Kids car seat at a later time. iPro Baby is the perfect complement to our Apollo / Apollo Duo and Saturn R / Saturn R Duo strollers and sets. Combining them results in an agile Shop'n Drive System. The car seat can be removed with one hand only and allows you to let your little one to continue sleeping when carrying him or her from the stroller into the car.
